List of Contents

NUMBER 1

Bert De Reyck and Willy Herroelen — 1 — An optimal procedure for the resource-contrained project scheduling problem with discounted cash flows and generalized precedence relations

James R. Soltys and James P. Ignizio — 19 — Boundary search procedure for the design and training of an ontogenic neural network classifier

A. Tuzikov, M. Makhaniok and R. Männer — 31 — Bicriterion scheduling of identical processing time jobs by uniform processors

Víctor Parada, Mauricio Sepúlveda, Mauricio Solar and Arlindo Gómes — 37 — Solution for the constrained guillotine cutting problem by simulated annealing

Kun-Jen Chung — 49 — A theorem on the determination of economic order quantity under conditions of permissible delay in payments

Konstantin Kogan and Eugene Levner — 53 — A polynomial algorithm for scheduling small-scale manufacturing cells served by multiple robots

Lakdere Benkherouf — 63 — Note on a deterministic lot-size inventory model for deteriorating items with shortages and a declining market

F. R. B. Cruz, J. MacGregor Smith and G. R. Mateus — 67 — Solving to optimality the uncapacitated fixed-charge network flow problem

NUMBER 2

Christos Koulamas — 83 — A guaranteed accuracy shifting bottleneck algorithm for the two-machine flowstop total tardiness problem

Shigeru Tsubakitani and James R. Evans — 91 — Optimizing tabu list size for the traveling salesman problem

Yong Ju Kim, Yeo Keun Kim and Yongkyun Cho — 99 — A heuristic-based genetic algorithm for workload smoothing in assembly lines

Ho Woo Lee and Boo Yong Ahn — 113 — A queueing model for optimal control of partial buffer sharing in ATM

David Wright — 127 — Analysis of the market for access to broadband telecommunications in the year 2000

Adli Mustafa and Mark Goh — 139 — Finding integer efficient solutions for bicriteria and tricriteria network flow problems using DINAS

Qidong Cao and Mark A. McKnew 159 Partial termination rule of Lagrangian relaxation for manufacturing cell formation problems

NUMBER 3

James A. Chisman 169 Using discrete simulation modeling to study large-scale system reliability/availability

Hoon-Shik Woo and Dong-Soon Yim 175 A heuristic algorithm for mean flowtime objective in flowshop scheduling

Tayfur Altiok, C. Vu Duy and Melike Baykal-Gursoy 183 Two load sharing processors with failures

H. W. Lee, J. G. Park, B. K. Kim, S. H. Yoon, B. Y. Ahn and N. I. Park 191 Queue length and waiting time analysis of a batch arrival queue with bilevel control

Moon-Won Park and Yeong-Dae Kim 207 A systematic procedure for setting parameters in simulated annealing algorithms

Sehun Kim and Jaehyun Yeo 219 Optimal scheduling in CDMA packet radio networks

Gengui Zhou and Mitsuo Gen 229 An effective genetic algorithm approach to the quadratic minimum spanning tree problem

A. J. Orman, A. K. Shahani and A. R. Moore 239 Modelling for the control of a complex radar system

NUMBER 4

Ina S. Markham and Terry R. Rakes 251 The effect of sample size and variability of data on the comparative performance of artificial neural networks and regression

M. Selim Akturk and M. Bayram Yildirim 265 A new lower bounding scheme for the total weighted tardiness problem

Willy Herroelen, Bert De Reyck and Erik Demeulemeester 279 Resource-constrained project scheduling: a survey of recent developments

Masood A. Badri, Donald L. Davis, Donna F. Davis and John Hollingsworth 303 A multi-objective course scheduling model: combining faculty preferences for courses and times

Kemal Altinkemer, Indranil Bose and Raktim Pal 317 Average waiting time of customers in an $M/D/k$ queue with nonpreemptive priorities

Lawrence M. Seiford and Joe Zhu 329 An acceptance system decision rule with data envelopment analysis

Chih-Hang Wu, Jose A. Ventura and Sharon Browning	333	Computational comparisons of dual conjugate gradient algorithms for strictly convex networks
Call for papers	I	

NUMBER 5

Roger Z. Ríos-Mercado and Jonathan F. Bard	351	Computational experience with a branch-and-cut algorithm for flowshop scheduling with setups
Wai Ki Ching	367	An inventory model for manufacturing systems with delivery time guarantees
Lioubov Dombrovskaia, Patricio Rodríguez and Miguel Nussbaum	379	Knowledge-based language for modeling linear programming problems
Lawrence M. Seiford and Joe Zhu	389	On piecewise loglinear frontiers and log efficiency measures
Eleni Pratsini	397	Learning complementarity and setup time reduction
Patricio Rodriguez, Miguel Nussbaum, Rodrigo Baeza, Gerardo León, Marcos Sepúlveda and Agustín Cobián	407	Using global search heuristics for the capacity vehicle routing problem

NUMBER 6

Guisseppi A. Forgionne	419	Delivering complex decision rules to top level managers through decision support systems: a case study in army housing management
M. A. Kaboudan	431	A dynamic-server queuing simulation
Angelo Monfroglio	441	Hybrid heuristic algorithms for set covering
Gang Yu and Jian Yang	457	On the robust shortest path problem
Reinaldo Morabito and Valdir Garcia	469	The cutting stock problem in a hardboard industry: a case study
Gin Hor Chan and Eng Ung Choo	487	Extensions of simple eyeballing dynamic lot sizing heuristics
Martine Labbé, Gilbert Laporte and Patrick Soriano	499	Covering a graph with cycles
Hsiao-Fan Wang and Yi-Chun Liao	505	A hybrid approach to resolving a differentiable integer program

NUMBERS 7–8

Chih-Chien Tu and Hsuanjen Cheng	519	Spectral methods for graph bisection problems
Shirish Joshi, Hanif D. Sherali and Jeffrey D. Tew	531	An enhanced response surface methodology (RSM) algorithm using gradient deflection and second-order search strategies
C. J. Willits and D. C. Dietz	543	Rapid, efficient analysis of the $\lambda(n)/C_k/r/N$ queue, with application to decomposition of closed queuing networks
Vaidyanathan Jayaraman, Rajesh Srivastava and W. C. Benton	557	A joint optimization of product variety and ordering approach
J. E. Beasley and B. Cao	567	A dynamic programming based algorithm for the crew scheduling problem
Jasmit Singh Kochhar, Bryce T. Foster and Sunderesh S. Heragu	583	HOPE: a genetic algorithm for the unequal area facility layout problem
Chae Y. Lee and Seok J. Koh	595	A design of self-healing ATM networks based on backup virtual paths
Natalie C. Simpson and S. Selcuk Erenguc	611	Improved heuristic methods for multiple stage production planning
Maria Teresa Almeida and Mário Centeno	625	A composite heuristic for the single machine early/tardy job scheduling problem
Jonathan M. Thompson and Kathryn A. Dowsland	637	A robust simulated annealing based examination timetabling system
T. Chakrabarty, B. C. Giri and K. S. Chaudhuri	649	An EOQ model for items with Weibull distribution deterioration, shortages and trended demand: an extension of Philip's model
Renata Mansini and M. Grazia Speranza	659	A linear programming model for the separate refuse collection service
Chul Ju Hyun, Yeongho Kim and Yeo Keun Kim	675	A genetic algorithm for multiple objective sequencing problems in mixed model assembly lines

NUMBER 9

Amit Monga and Ming J. Zuo	691	Optimal system design considering maintenance and warranty
Martin J. Fischer and Carl M. Harris	707	Approximating by enhanced interpolation in queueing analyses
Hsing K. Cheng, Marshall Freimer, William B. Richmond and Ushio Sumita	719	Optimal repair of degrading computers under asymmetric information and incentive incompatibility

Mauro Dell'Amico, Francesco Maffioli and Marco Trubian	729	New bounds for optimum traffic assignment in satellite communication
S. Mathies and P. Mevert	745	A hybrid algorithm for solving network flow problems with side constraints
Tariq Aldowaisan and Ali Allahverdi	757	Total flowtime in no-wait flowshops with separated setup times
Jiye Han, Jianjun Wen and Guochuan Zhang	767	A new approximation algorithm for UET-scheduling with chain-type precedence constraints
Ho-Won Jung	773	A computing power allocation model in distributed database systems
Lea Friedman and Zilla Sinuany-Stern	781	Combining ranking scales and selecting variables in the DEA context: the case of industrial branches

NUMBER 10

Y. L. Chen and Kwei Tang	793	Minimum time paths in a network with mixed time constraints
Chiang Kao	807	Performance of several nonlinear programming software packages on microcomputers
Peter Chu, Kun-Jen Chung and Shaw-Ping Lan	817	Economic order quantity of deteriorating items under permissible delay in payments
Harvey H. Millar	825	The impact of rolling horizon planning on the cost of industrial fishing activity
L. Anand, D. Ghose and V. Mani	839	Probabilistic load scheduling with priorities in distributed computing systems
Oded Berman and Michal Cutler	857	Optimal software implementation considering reliability and cost
Hasan Pirkul and Vaidyanathan Jayaraman	869	A multi-commodity, multi-plant, capacitated facility location problem: formulation and efficient heuristic solution

NUMBER 11

W. L. Pearn and R. C. Chien	879	Improved solutions for the traveling purchaser problem
Sydney C. K. Chu and Edmond C. H. Chan	887	Crew scheduling of light rail transit in Hong Kong: from modeling to implementation
Sonja Novkovic and Davor Šverko	895	The minimal deceptive problem revisited: the role of "genetic waste"
Hesham K. Alfares	913	An efficient two-phase algorithm for cyclic days-off scheduling

Mhand Hifi	925	Exact algorithms for the guillotine strip cutting/ packing problem
Aliakbar Montazer Haghighi	941	An analysis of the number of tasks in a parallel multi-processor system with task-splitting and feedback
G. V. Krishna Reddy, R. Nadarajan and R. Arumuganathan	957	Analysis of a bulk queue with *N*-policy multiple vacations and setup times
R. J. M. Vaessens, E. H. L. Aarts and J. K. Lenstra	969	A local search template
William G. Bistline Sr., Snehamay Banerjee and Avijit Banerjee	981	RTSS: an interactive decision support system for solving real time scheduling problems considering customer and job priorities with schedule interruptions
A. K. Bhunia and M. Maiti	997	Deterministic inventory model for deteriorating items with finite rate of replenishment dependent on inventory level
Technical Note		
Ilkyeong Moon and Sangjin Choi	1007	A note on lead time and distributional assumptions in continuous review inventory models

NUMBER 12

Gautam Choudhury	1013	On a batch arrival Poisson queue with a random setup time and vacation period
Yi-Feng Hung and Yi-Cheng Hu	1027	Solving mixed integer programming production planning problems with setups by shadow price information
Blas Pelegrín and Pascual Fernández	1043	On the SUM-MAX bicriterion path problem
G. A. Vouros and H. T. Papadopoulos	1055	Buffer allocation in unreliable production lines using a knowledge based system
Deborah Koucky Radasch and N. K. Kwak	1069	An integrated mathematical programming model for offset planning
T. K. Roy and M. Maiti	1085	Multi-objective inventory models of deteriorating items with some constraints in a fuzzy environment
P. Fernández de Córdoba, L. M. García Raffi and J. M. Sanchis	1097	A heuristic algorithm based on Monte Carlo methods for the Rural Postman Problem
Elise D. Miller-Hooks and Hani S. Mahmassani	1107	Least possible time paths in stochastic, time-varying networks
Xiong Chen, Weishui Wan and Xinhe Xu	1127	Modeling rolling batch planning as vehicle routing problem with time windows

Han-Lin Li	1137	Solve least absolute value regression problems using modified goal programming techniques
John G. Klincewicz, Hanan Luss and Dicky C. K. Yan	1145	Designing tributary networks with multiple ring families
G. V. Krishna Reddy and R. Anitha	1159	Markovian bulk service queue with delayed vacations
Call for papers	I
